Meta FAIR, Research Intern *May 2025 - August 2025*
∘ SAM3. We work on the project of SAM3, whose predecessor, Segment Anything, is one of the most foundational perception models in computer vision.

NVIDIA, Research Intern *May 2024 - August 2024*
∘ Online HD Map Prediction. For the autonomous driving group at NVIDIA, we conducted research on building scalable generative pre-training for online high-definition (HD) map predictions..

Toyota Research Institute, Research Intern *May 2022 - August 2022*
∘ 3D tracking and motion forecasting from multiple cameras. End-to-end multi-object tracking (MOT) and motion prediction decrease tracking errors (ID-Switches) by more than 90% on nuScenes compared to previous state-of-the-arts (PF-Track - CVPR 2023).

TuSimple, AI Residency for Perception in Self-driving *June 2020 - August 2021*
∘ LiDAR-based 3D perception for autonomous driving. Public projects:
(1) Sparsity-inspired outdoor 3D detection, first transformer-based 3D detector, widely followed baseline since then (SST - CVPR 2022).
(2) A widely used and robust 3D multi-object tracking framework (SimpleTrack - ECCVW 2022).
(3) Data flywheel and object auto-labeling from single-object tracking (LiDAR-SOT - IROS 2021).
